

ARMD Transformative Aeronautics Concepts Program

# CONVERGENT AERONAUTICS SOLUTIONS PROJECT

## Spanwise Adaptive Wing

Matthew Moholt  
NASA AFRC

Dr. Othmane Benafan  
NASA GRC

# Enabling Reconfigurable Aircraft Through The **Spanwise Adaptive Wing (SAW)** Concept

- Increasing aircraft efficiency by reducing the rudder through the incorporation of SAW
- Articulating the outboard portions of the wing via Shape Memory actuation
- Lateral-directional stability and control augmentation
- Supersonic - Increased compression lift and reduced wave drag
  - Enabler for supersonic flying wing design

# SAW Development Path

Flight test

Ground test

CAS Objective: to develop all of the sub-systems for full scale infusion

- Technology and tool development and validation
- Scale-up validation
- A plan for the next a larger demonstration in a more relevant environment

# Reconfigurable Aircraft

F-111 Mission Adaptable Wing

## Historical Perspective

### Morphing Aircraft

Adaptive Compliant Trailing Edge

Flexsys Flex Foil™

XB-70 Valkyrie

### Folding wing aircraft

# Ground Folding

# A New Way to Actuate

- Shape Memory Alloy (SMA)
  - NiTiHf
  - Alloys that have a “memory.” These materials have the ability to remember and recover their original shapes with load or temperature.
  - SMAs exhibit a solid-to-solid, reversible phase transformation
  - Can be ALL-Electric driven

## Multifunctional Properties

Shape Memory Effect	Superelasticity
Hardness	Corrosion Proof
	Sensing
Bio-Compatibility	Impact Resistant
Energy Harvesting	Damping
	Actuation
	Energy Absorption

# Current State-of-the-Art Rotary Actuators

## HYDRAULIC ACTUATORS

## PNEUMATIC ACTUATORS

### SMA Actuator

Model # CAS2016

- Size ~450 in<sup>3</sup>
- Weight ~58.5 lbs
- Temperatures~ tunable based on alloy used
- Torque ~ 100,000 in-lbs
- Angle ~ 90 deg

**Non-traditional – Revolutionary – Transformative**

### **Assessment of Current Technology- With ARMD Thrusts in Mind**

Current Technologies (hydraulic, pneumatic, or magnetic motors) do not provide a step-change towards “Big Leaps” in efficiency & environmental performance

- Heavy, and bulky – other options include gear boxes – large systems
- With SMA technology: **20%** the weight & **15%** the size of comparable hydraulic system

# Flight testing out of the box ideas

## PTERA

### Prototype Technology Evaluation and Research Aircraft

- Roughly based on an 11%-scale 737
- Baseline configuration has an 11.3ft span, 12ft length, and 4.3ft height
- ~200lb gross takeoff weight (40lb payload)
- Powered by two JetCat P200 turbojet engines (50 lbs thrust each)
- Flown 13 times (SysID, performance evals)

AREAI

# Flight Test Experiment

## Trade space evaluation

Aero analysis

Hinge Loads

Actuator Loads

Actuator Design

Configuration	Sweep Angle ( $\lambda$ )	Wing tip Span ( $b_w$ )	C.G. shift (aft of root $\frac{1}{4}$ -chord)	Wing tip Yaw Control (% of rudder @ 10.0° deflection)			Structural Assessment
				75.0°	-75.0°	0.0°	
1	0.0°	12.0 in	1.0 in	10.4	8.8	6.1	Yes
2	0.0°	15.0 in	1.0 in	12.4	10.7	9.3	Yes
3	0.0°	18.0 in	1.0 in	14.4	12.5	11.5	Maybe
4	10.0°	12.0 in	3.0 in	20.4	11.7	10.8	Yes
5	10.0°	15.0 in	3.0 in	25.9	16.0	13.2	Yes
6	10.0°	18.0 in	3.0 in	31.7	20.6	15.9	Maybe
7	20.0°	12.0 in	5.4 in	29.6	14.8	13.4	Yes
8	20.0°	15.0 in	5.4 in	38.5	21.5	16.6	Yes
9	20.0°	18.0 in	5.4 in	48.1	29.1	19.8	No
10	30.0°	12.0 in	8.0 in	38.3	17.3	16.2	Yes
11	30.0°	15.0 in	8.0 in	50.6	27.3	19.9	Maybe
12	30.0°	18.0 in	8.0 in	64.2	38.1	23.7	No

Baseline Values

Design Space Explored

Wing and Joint Design

For the PTERA demonstration SAW produces nearly 40% of total rudder authority  
Can this be used to reduce rudder size?

# Flight Test

- Two flight campaigns on Edwards Air Force Base dry lakebed
- First flight late October/Early November 2017

**WORKING TOWARD FULL SCALE**

# NiTiHf Alloy Processed in Large Scale

- **60lbs of NiTi-20Hf material were melted**
  - Melting process scalable from 1 lbs to >100 lbs
  - Repeatable properties (for lab verification, actuator back ups, and future flights.
- **Extrusion to rod and tubing**
  - From 4" to 0.5" in diameter and from 1.2" to 0.5" in diameter reduction
- **Tubes drilled and splined**
  - Final form of actuator before training and instrumentation.

# Ground Test: Large tube testing

- 1" tube
- 10" long

d

- 20,000 in-lbf test rig
- Fully instrumented for SMA large tube testing

# 3 Mechanisms for Ground Test

- Use 0.5" and 1" tubes
- Target for 90 degrees of rotation
- 5000 in-lbf torque
- Explore locking features

# F-18 Demonstration?

Figure 1: View of the analyzed SAW F-18 geometry (-70 deg wing deflection)

Figure 2: Percentage changes in lift coefficient for different wing deflections, from Cart3D
